Top Fellow - Product Management

Vinayak Rastogi

Product | IIT Delhi CSE
South Delhi, Delhi, India

Summary

I started as a cloud/MLOps engineer and moved into Product because I loved shaping “why” as much as “how.” Since then I've built and scaled products across Consumer tech, B2B SaaS, and ML platforms, serving 500K+ users and 250+ brands - often in early-stage, high-ambiguity environments.

IIT Delhi CS Grad. Technical enough to debate system architecture, product-minded enough to know when it doesn't matter. What drives me: finding elegant solutions between what users need, what's technically feasible, and what moves the business.

Always happy to chat Product, AI, startup chaos, 0→1 builds, or why your favorite metric might be misleading you

Experience

Wishlink
Product Manager
October 2024 - Present (1 year 11 months)
Gurugram, Haryana, India

Founded and led InfluenceOS: Wishlink's B2B SaaS platform and India's first creator commerce operating system (featured at Wishlink × Meta event). Built 0→1 over 8 months, helping 250+ brands unify creator discovery, campaign tracking, and real-time attribution into a single performance-first platform.

Now exploring the next frontier: product discovery and D2C strategies. How do creators find products worth promoting? How can brands leverage social commerce authentically? What does recommendation look like when trust matters more than reach?

Making creator commerce measurable, scalable, and human.

Wiom

Product Manager

July 2022 - September 2024 (2 years 3 months)

Delhi, India

Part of Wiom's founding product team. We scaled from ~5K to 150K+ households (500k+ users) across India in about 2 years.

I worked on the messy stuff: building our lead-to-install matching system, redesigning how installations actually happened (lots of field ops), and figuring out why customers churned. Also spent time on the supply side, making life (and goals) easier for our partners.

The most valuable thing I learned: Talking to your users/customers, and obsessing over root problem identification, helps build the maximum leverage (and gut) as a PM. Designing for underserved communities, with constraints like digital literacy and lack-of-trust, taught me to always challenge assumptions and think from first principles.

Anheuser-Busch InBev

1 year 11 months

MLOps Engineer

August 2021 - June 2022 (11 months)

Bengaluru, Karnataka, India

Helped architecting and deploying the proprietary automated Marketing Measurement Solution (Market Mix Model), as part of the infra team

Cloud Engineer II

August 2020 - July 2021 (1 year)

Bengaluru, Karnataka, India

Built the Digital Decoupling platform for Europe, developing Serverless ETL pipelines on Azure for event-driven change data capture. Also set up system health monitoring and alerting.

GfK

Data Engineer

May 2019 - July 2019 (3 months)

London, United Kingdom

Worked on the "Newron Ecosystem" initiative - an internal re-platforming and cloud migration from internal GfK datacenters to Google Cloud

RedMart
Data Scientist
May 2018 - July 2018 (3 months)
Bengaluru, Karnataka, India

Team: Competitor Intelligence

Designed a cross-competitor product mapping algorithm, giving new product recommendations for Redmart's catalog, and recommendations to the pricing engine.

Education

Indian Institute of Technology, Delhi
Bachelor of Technology, Computer Science · (2016 - 2020)

Delhi Public School - R. K. Puram
CBSE - CS, Physics, Chem, Maths · (2014 - 2016)

Bal Bharati Public School
· (2004 - 2014)
